Version 1 Release 1

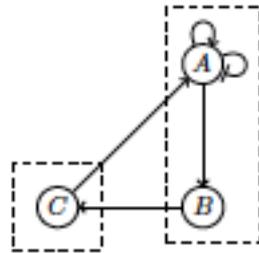

Figure 4: A simple Logical Regulatory Network.

Logical (Boolean / multi-level) models

The logical functions are the following:

$$A_{t+1} := \begin{cases} 2 & \text{if } (1 \leq A_t < 2) \text{ or } ((C_t \geq 1) \text{ and } (A_t \geq 1)) \\ 1 & \text{if } (A_t < 1) \text{ and } (C_t \geq 1) \\ 0 & \text{otherwise} \end{cases}$$

$$B_{t+1} := \begin{cases} 1 & \text{if } A_t \geq 1 \\ 0 & \text{otherwise} \end{cases} \quad C_{t+1} := \begin{cases} 1 & \text{if } B_t \geq 1 \\ 0 & \text{otherwise} \end{cases}$$

Standard Petri nets

</sbml>

```

3 qualitative species (A, B, C)

Transition tr_C
with two inputs (A, B)

and one output (C),
which is assigned a
value upon tr_C effect

The default and function
terms defining the value
assigned to C

C is set to 0 by default

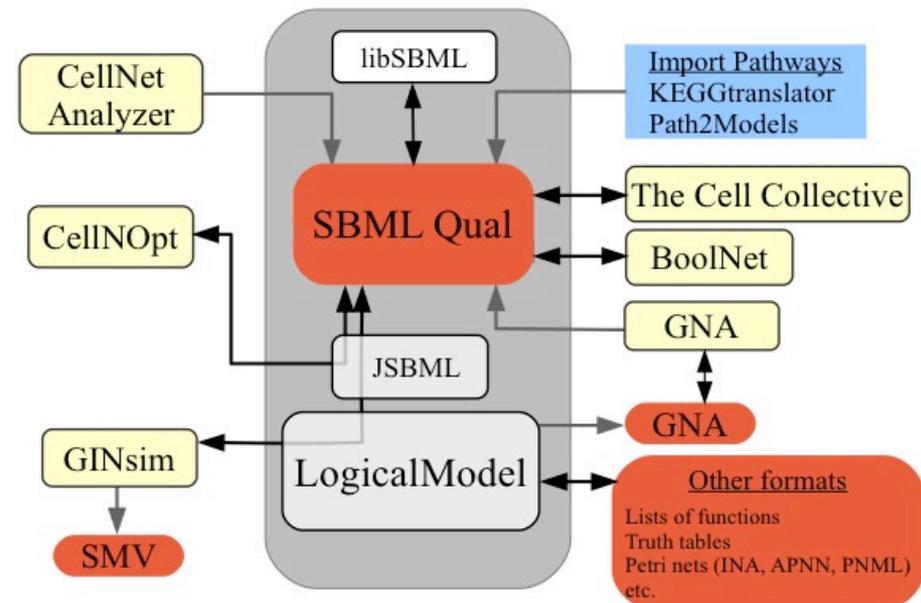

C is set to 1 if the following
condition is fulfilled

A=1 AND B=0

SBML qualitative models: a model representation format and infrastructure to foster interactions between qualitative modelling formalisms and tools

SBML qualitative package
inter-operability between tools
demonstrated

Future extensions?

Symbols

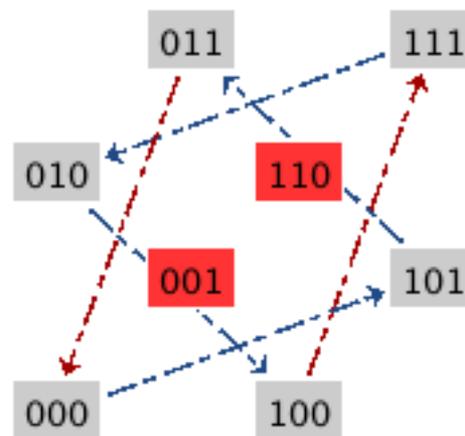

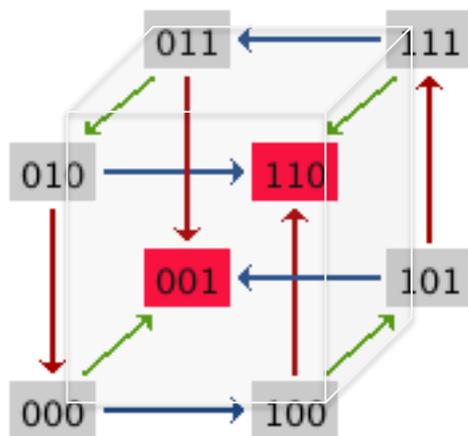

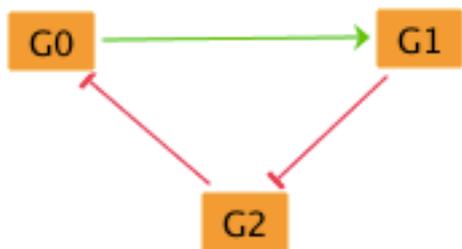

Temporisations

Classes (sets) of models, random models

Interaction with SBML Core concepts

WHAT ABOUT SIMULATION PARAMETERS?

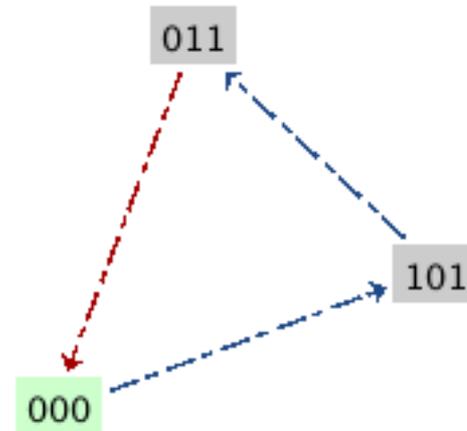

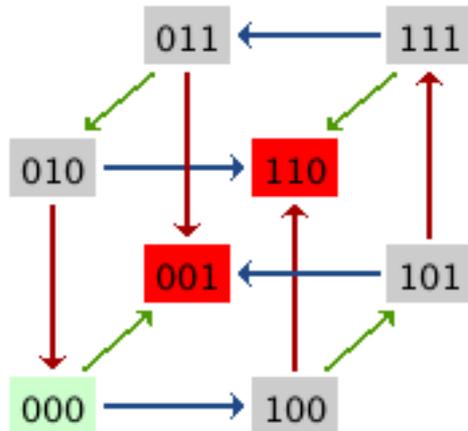

Dynamics over the whole state space

ASYNCHRONOUS

SYNCHRONOUS

From an initial condition

Simulation parameters in GINsim

Perturbations

Updating scheme

Representation of the dynamics

Initial conditions
0 (all) or 1,...

Strategy + limitation of the exploration
Reduction of (pseudo)-outputs

Construction of the Dynamics

Select a perturbation:

Strip outputs

Simulation Settings

filter:

parameter_1
parameter_2
parameter_3
parameter_4

Construction Strategy

Breadth First Depth First

Size limits

Depth:
Number of States:

Priority Class Selection

Initial States

name	use	G0	G1	G2
initState_1	<input checked="" type="checkbox"/>	M1	0	0
initState_2	<input type="checkbox"/>	0	0	0

Perturbations menu:

- ✓ --
- G0 KO
- G1 E1
- G0 KO G1 E1

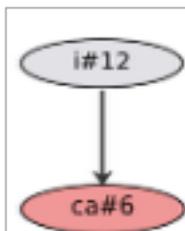

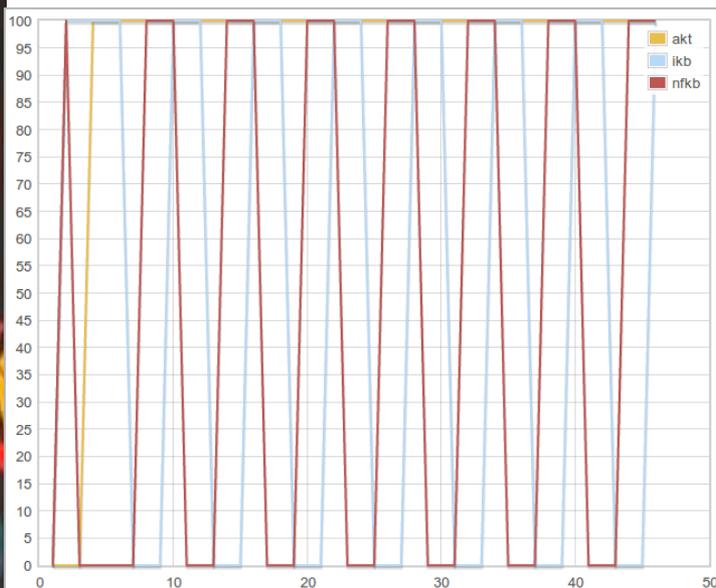

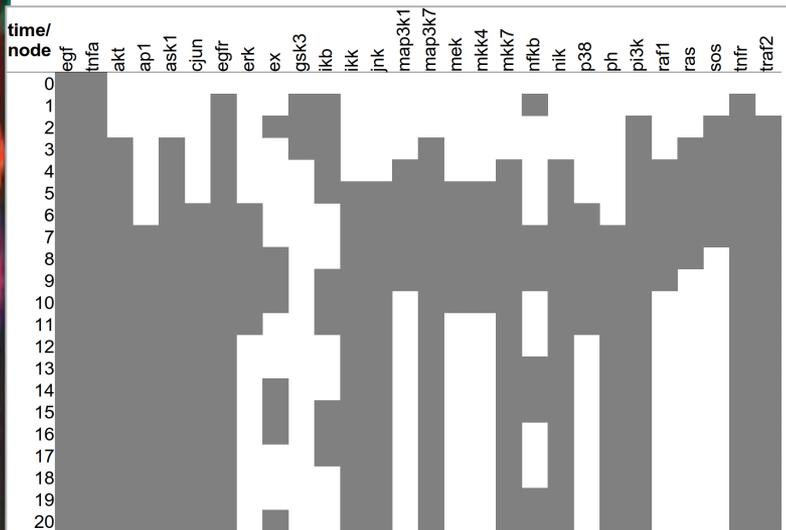

Updating scheme menu:

- ✓ asynchronous
- synchronous
- priorities_1

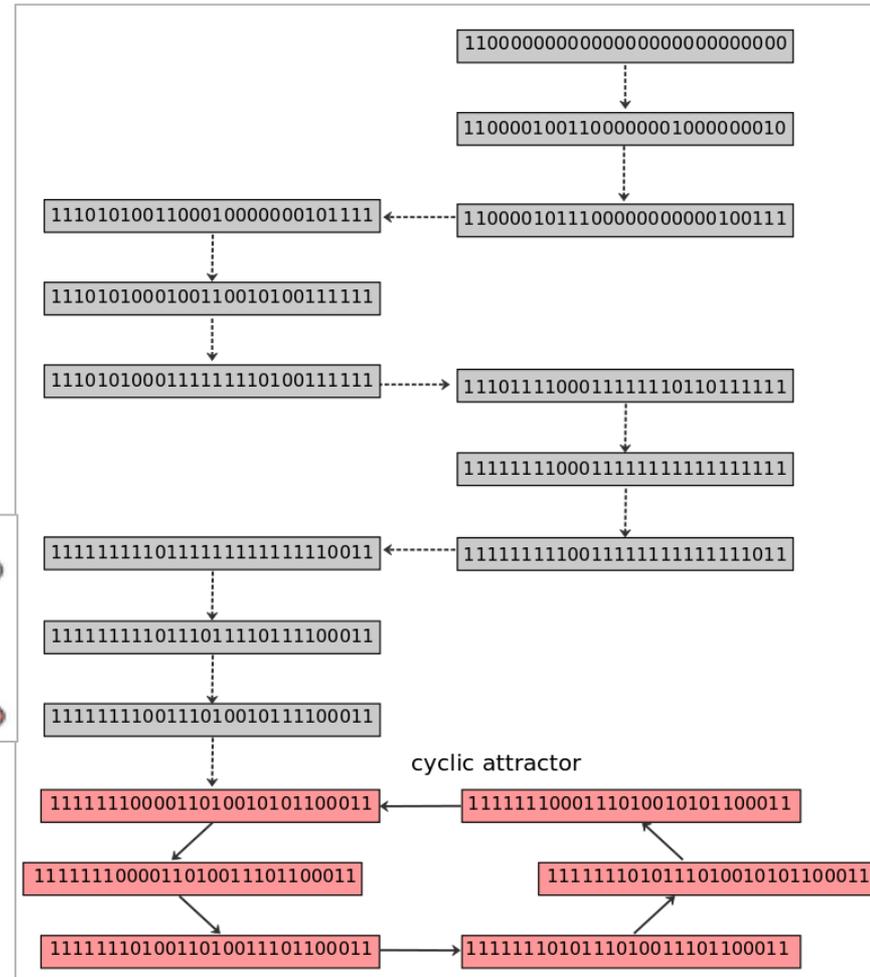

Representation of the dynamics menu:

- ✓ State Transition Graph
- Strongly Connected Components Graph
- Hierarchical Transition Graph

Representations of the dynamics

A Boolean model, synchronous update

A variety of updating schemes

Block-sequential

Stochastic simulations BoolNet, MaBoss

A variety of strategies to limit the construction of the dynamics

Exploration strategy (breadth/depth first)

Number of states / depth limitation

Specification of the behaviour of input nodes

Cell Collective vs GINSim

Perturbations: modification of the logical functions

Representation of the dynamics

SED-ML is an XML-based format for encoding simulation setups, to ensure exchangeability and reproducibility of simulation experiments. It follows the requirements defined in the MIASE guidelines.

Conclusions from last COMBINE meeting

SBML Test Suite

Version 3.1.0, released 11 December 2013 (see box at right →)

Latest test case archive released 26 January 2014

The SBML Test Suite is a conformance testing system. It allows developers and users to test the degree and correctness of the SBML support provided in a software package. The test files are platform-independent and can be used on any OS.

The main authors are **Sarah M. Keating**, **Frank Bergmann**, **Lucian Smith**, **Michael Hucka**, and Kimberly Begley.

Components and facilities

The current SBML Test Suite consists of the following components:

- A collection of SBML models, together with expected simulation outputs, that can be used to test interpretation of SBML model semantics. The set of test cases can be downloaded as a **complete archive** [↗](#), or a subset of selected tests can be obtained using the online portion of the Test Suite.
- The **SBML Test Runner** [↗](#), a standalone application that can be used to run an application against the collection of simulation test cases and report successes and failures.
- An **online facility** for evaluating the results of running the simulation test cases (as an alternative to the standalone Test Runner)
- An **online database** [↗](#) of test results provided by software authors for their SBML-compatible software packages.
